

CHICAGO, IL - - September 25, 2000 - - MINI OPTICAL FIBER NETWORK SADDLE ON BASE (MOFNSB) is a miniature version of Richco's Optical Fiber Network Saddle (OFNSB). The entry point allows almost no resistance to loading based on nominal diameters. This places little to no stress on the optical fiber. The low profile also allows for better airflow over the board, and takes up very little space on the board. Because of its small size, the MOFNSB allows board to be placed close together. This version is comes with an adhesive backed base for easy placement at any point of your route.

For more information on the MOFNSB, contact Curt Fuller at 773-290-5611.

Richco Inc. is a global manufacturer of plastic components. Since their inception in 1954 they have specialized in supplying quality circuit board hardware, wire routing products, cable ties, clips and clamps, as well as the fiber optic and telecommunication accessories, and have expertise in the molding and extrusion of plastic. Richco currently operates fifteen facilities worldwide. Richco, Inc. Chicago, IL Ph: 773-539-4060 Fax: 773-539-6770 www.richco-inc.com.
